

DOUBLE WIDTH SELF CLOSING SAFETY GATES NOW AVAILABLE FROM STOCK

Our range of safety gates has been extended to include double width self-closing safety gates, suitable for larger openings between 1m and 1.8m wide.

The double self-closing safety gate option has been fully tested and is compliant with the requirements of international standards including EN14122.

As with the single gates, the double gates are both self closing to provide a compliant barrier when a person has passed through the gate. This is achieved by strengthening the number of fixings when compared to the single gate option. The double gate does not require any locking mechanism to be used by the operator.

The gates have also passed extensive salt spray and life cycle testing to ensure reliability and durability. Gates are supplied either hot dipped galvanised or powder coated in safety yellow and can be easily trimmed to size on site. Gates can be quickly fixed to existing supporting structures, including square, flat or angle uprights.

Features and Benefits

- Robust self closing mechanism
- Quick and easy to assemble
- Fit larger openings, greater than 1m
- Maximum width 1.8m
- Independently tested
- Suitable for external and internal use
- Gates supplied with fixing kits
