

NEW RANGE OF SELF CLOSING SAFETY GATES AVAILABLE FROM STOCK

Our range of safety gates has been re-designed, allowing us to offer customers a greater choice of self-closing gates for both internal and external applications.

The gates are spring loaded so they automatically close behind the user to provide a safe and reliable access solution for any opening, ladder/stair access points, roof hatches, walkways, industrial machinery and other restricted areas where regular access is required.

Our new range of CE accredited safety gates has been independently tested and is compliant with requirements of international standards including EN 13374 Class A and EN ISO 14122 Part 3 & 4. The gates have also passed extensive salt spray and life cycle testing to ensure reliability and durability.

Each gate is 1m wide and is supplied either hot dipped galvanised or powder coated in safety yellow. The gate can be easily trimmed to size on site. Gates can be quickly fixed to existing supporting structures, including square, flat or angle uprights.

Features and Benefits

- Robust self closing mechanism
- Quick and easy to assemble
- Standard 1m gate can be cut to size
- Independently tested
- Universal mounting
- Suitable for external and internal use
- Gates supplied with fixing kits
